TITLE Mathematics Curriculum Guide, Grades K-6, Volume 2.

INSTITUTION Los Alamos Public Schools, N. Mex.

PUB DATE [74]

NOTE 262p.; This document contains 131 leaves, all of which are 11 inches wide by 8 1/2 inches high and require two microfiche frames

EDRS PRICE MF-\$0.65 HC-\$9.87

DESCRIPTORS Activity Learning; Basic Skills; *Behavioral Objectives; Curriculum; *Curriculum Guides; *Elementary School Mathematics; Fractions; Games; *Geometric Concepts; Instruction; *Instructional Materials; Practical Mathematics

ABSTRACT

This curriculum guide for grades K-6 is the second volume of a two-part series. It is meant to provide an ordered sequence of mathematical concepts from which teachers may organize an arithmetic program allowing for individual student progress with the greatest amount of individual attention. Each topic is arranged into levels based on the topic's content and not necessarily by grade level. Each level contains the following general categories: Concepts, Behavioral Objectives, References and Resources. The objectives are matched with textbooks referenced by pages and with specific resource materials to be used in the instruction. A list of activities that may be used for instruction is also provided at the end of each level. Topics covered include fractions, money, time, systems of measurement and geometry. Also provided is a list of 54 classroom games that are directly related to the topics included in this guide. For Volume I, see SE 017 304. (JP)

FOREWARD

This continuum represents a revision of the guide that was constructed for the Los Alamos Schools during the summer of 1969. It is meant to provide a program in arithmetic that will permit the individual student to progress through an ordered sequence of mathematical concepts, and give the teacher as opportunity to allow for individual progress with the greatest amount of individual attention.

During the school year 1969-1970, the Los Alamos Schools' Mathematics Committee examined the guide and recommended modifications and additions, and these recommendations are reflected in this edition.

MATHEMATICS

GENERAL CONTENT GOALS:

The content of an improved mathematics program should:

1. Lead the student to understand the language and demonstrate the concepts, structures, and techniques of mathematics.
2. Have mathematical integrity which involves internal consistency, accuracy, and precise vocabulary.
3. Develop in the student a sensitivity to patterns in mathematics and be able to apply these patterns.
4. Develop an appreciation of the broad cultural aspects of mathematics and its contributions to the development of the modern world.
5. Plan for meeting the educational and vocational objectives of the individual student.
6. Help each student reach at least minimal competencies.
7. Be designed to meet the needs of a constantly changing technological society.

APPROACH AND SUGGESTIONS FOR USING THIS GUIDE

BEFORE USING THIS CONTINUUM, PLEASE READ THE FOLLOWING:

1. This continuum contains 13 conceptual areas and is not meant to reflect traditional grade levels.
2. Each level contains the following general categories: Concepts, Behavioral Objectives, References and Resources. Under References and Resources, we have left columns for textbooks, audio-visual materials, and prepared units or packets. The item, audio-visual materials includes such items as filmstrips, transparencies, records, dittos, math kits, and other materials found in the particular buildings.
3. Each concept refers the teacher and student to several behavioral objectives. The behavioral objectives that are to be considered required are designated with an asterisk, *.
4. Although there is one textbook referred to more than any other book or reference in this continuum, teachers are requested not to consider this source as the only or best source for instruction. This text has been referred to in depth because we felt that many teachers, new or experienced, may need a basic source of reference. However, we hope that as this continuum is employed by teachers, they will expand their sources to many textbooks and include them in their recommendations for the committee that next revises this guide.
5. The first two columns under References and Resources are for various textbooks and their pages that apply to the behavioral objectives. Over the first of these two columns is found the capital letters HM. This stands for the textbook, Houghton-Mifflin. The second column is reserved for other textbooks that have sections that apply to the behavioral objectives. Other textbooks are abbreviated in this column, i.e., HBW stands for Harcourt, Brace and World, HRW stands for Holt, Rinehart, and Winston.

GAMES

1. Silent Action
Give each child a card with one of the numerals from 1 to 10 written on it. Have each child, in turn, place his card on the chalkledge in the proper sequence.
2. Fix the Mix-Up
Have pupil arrange cards with numerals from 1 to 10 written on them to show the proper sequence.
3. Detective
Place pictures of sets of from one to ten objects on the chalkledge. Then flash a numeral card and have two children compete to see who will be the first one to find the set illustrating the given number.
4. Former Game
Write a numeral on the chalkboard or flash a numeral card. Call on a child to perform an action he chooses the number of times indicated by the numeral.
5. Arithmetic Neighbors
Distribute numeral flashcards representing the whole numbers from 1 through 10. Call on a child to come to the front of the room, tell his number, and ask who his neighbors are.
6. Quick and Quiet
Give each child a set of flashcards of the numerals from 1 to 10. Hold up a picture of a set of objects and have the children respond in unison by counting the number of objects in the set and holding up the numeral card for the correct number of objects.
7. Flying to the Moon
The teacher has placed Earth and Moon on a flannel board. A number of rockets are used which can be manipulated by the children. How many are flying to the moon? How many are flying from the moon?
8. "Postman"
Draw apartment house and number each door. The number on the door tells the children how many letters to deliver.

9. Number Books
Staple together sheets of paper to make one booklet for each member of your class. Have children draw and color objects to correspond with numbers.
10. Hanging up the Wash
Set up a clothes line and have children hang up numbers in proper sequence.
11. Picture Cards
Cut twenty tagboard picture cards. Use these cards to make ten matching sets of picture quantities. Have children match sets--include empty set.
12. Number Round Up
Make a large tagboard disc with movable hand attached to its center. Write the numerals from 1 through 10 out of sequence around the circumference of the circle. Have a pupil spin the hand, read the numeral to which it points and tell which numbers come before and after the designated number in natural order.
13. Telephone
Dial a play telephone and say "I'm dialing three plus one." The child called upon answers, "Well, your number is four." If the child answers incorrectly say, "Sorry, wrong number," and dial again.
14. Head and Tails
Place pictures of sets of objects on the chalkledge. Send a boy to the first picture and a girl to the last picture; both should be ready to write on the board. At a given signal, the children write as quickly as possible the numeral for the cardinal number of each set. Variation: Use addition and subtraction cards and have the competitors write the answers on the board above each card.
15. Thinker's Fun
Distribute cards with a numeral for a number greater than 10. Then appoint 3 children to be the symbols $<$, $>$, and $=$. Every child should have a card. Call on 2 children to go to the front of the room, hold up their cards and tell the number of tens and ones in their numbers. Then have the class choose the card holder with the correct symbol of relation to stand between the 2 numerals and read the number statement; for example, "25 is greater than 13." In a case such as this, the 2 children holding numeral cards may be asked to change places and the child holding the sign may be replaced by the one having the "less than" sign.

16. Seven Up
Have all the children put their heads down on their desks. Arrange sets of from 1 to 10 objects on a table at the front of the room. Distribute to 7 children flashcards each containing a numeral from 1 to 10. Call out, "Seven up!" Those children holding the cards stand, go to the front of the room, say their numbers, and place their cards on the corresponding sets of objects. The first child to return to his seat after correctly matching his card with a set of objects is the winner and assumes the duties of the teacher. He rearranges the sets and distributes the cards to 7 other children. When a new winner is established, the first winner rejoins the class and puts his head down.
17. Knock Out
For practice in the sequence of larger numbers, write at least 4 numerals representing a number sequence on the chalkboard. Let 1 of the numerals be incorrectly placed. Have a pupil "knock out" the wrong number by placing an X on it.
18. Information Please
Arrange the class in teams. Call out a number from 10 to 99. Have a member of each team tell something about the given number. For example, 1 contestant might tell what number comes before (or after) the given number; how many tens and ones are in the given number; or the sum of 3 and the given number. If a contestant gives an incorrect answer, he sits down and a member of the next team is asked the same question. The game continues in this manner until the only children left standing are all members of the same team.
19. What's My Numeral?
Pin a numeral on the back of a child without his knowing what numeral it is. Let him ask questions about the number, to which the class can answer yes or no. Then give him 3 guesses.
20. Change Places
Tell a child to move to the third desk in the second row. This child tells the pupil occupying that place to move to another desk such as the fifth desk in the last row. The game continues in this manner until every child has had an opportunity to participate. Each time a child gives directions he should do so in a loud clear voice so that the class may check to see that the directions are being correctly carried out.

21. Counting Higher
Write some numerals for upper decade numbers on the chalkboard. Assign a row or team to each numeral. At a given signal the first child on each team runs up and writes the numeral for the next number in sequence. He then returns and hands the chalk to the next person on his team, and so on. The first team to finish with a perfect score is the winner. Variation: This activity may be used to provide practice on descending number sequences as well as ascending sequences.
22. Expando
Make a card for each of the numerals for 1 to 99 and place all the cards in a container. Call on 1 child at a time to select a numeral card and to write its expanded form on the chalkboard. For example, he would write $50 + 8$ for the numeral 58.
23. Speed
Flash cards containing numerals in the expanded form to 2 pupils at a time. Have them race to find another name for the expanded numeral on the number line or the one-hundred chart.
24. Missing Number
Place 3 flashcards with numerals on them in a pocket chart in horizontal form. Turn 1 card to the reverse side. Tell the sum of the 3 numbers. Then call on a child to tell the missing number and turn the card around to verify his answer.
25. Relay Game
Have 2 teams compete to find the vertical notation card which corresponds to each addition or subtraction equation on cards being flashed by a leader. Keep score to heighten interest.
26. Jet Flight
Choose a child to be the pilot and assign him a number. Distribute cards containing the basic addition and subtraction combinations with missing sums and differences to several other children. Then have the pilot go to each card holder and say, "I fly Jet (8). Will you fly with me?" Each child holding a combination of 8 should say, "Yes, I will fly with you," and he should state his combination of 8, tell the answer and get in line behind the pilot. Those children holding cards with combinations of other numbers should say, "No, I will not fly with you," and state their combinations. The game should continue until all children with combinations of 8 are in line behind the pilot.

27. What Numeral Am I?
Write some open sentences such as the following on the chalkboard: $10 - \square = \square$, $20 - \square = \square$, $30 - \square = \square$, $50 - \square = \square$. Call on a child to fill in the first place holder with any one of the numerals from 1 to 9 and to ask another child, "What numeral am I?" Have the second child fill in the second placeholder and read the equation.
28. Secret Equations
Think of an addition or subtraction combination. Tell the children the sum or difference and have them cite all of the combinations involving the sum or difference until they discover the secret equation.
29. Blast Off
Draw a sketch of a rocket on the board and write the numerals 54321 next to it. Each child who is able to give a combination of each of these numbers without hesitating may pretend to "blast off" his rocket.
30. All Aboard
Announce that the train is leaving on track 7. Then say "Anyone who knows a way of making 7 may board the train." Let all children who give correct combinations of 7 climb aboard the imaginary train at the front of the room.
31. Quiet Answer
Give each child a set of cards containing one card for each of the numerals from 1 through 10. Read or dictate a "story problem" to the class and have the children answer by holding up the card with the correct answer.
32. Speedy Pointer
Write the numerals 1 through 10 on the chalkboard. Divide the class into 2 teams and give the first member of each team a pointer. Flash a card of an equation with a missing addend and have the children point to the numeral on the chalkboard which completes the equation.
33. Just The Same
Give every child a numeral card for each of the numbers 1 through 10. Then make such statements as, "I am thinking of a number that means the same as $4 + 1$." Have the children tell the number by holding up the correct card, in this case the 5 card.

34. Partners
A pupil names a factor and asks someone else to help him make a given product. For example:
"I am 2. Who will help me make 8?"
35. Relatives
Write one combination on the board. Call upon children to write the related combinations. The children who write the combinations correctly are "relatives."
36. More Relatives
Send a small group of children to the board. Each child writes a combination and returns to his place. Another group of children steps up and each child writes the related combinations and one new combination. Each child in a third group complete the related combinations and writes a new combination. The game continues in this manner.
37. Arithmetic Puzzle Box
Each child draws a flashcard from a large box. He shows his card, says the combination, and calls upon someone else to tell all the related combinations.
38. Products
A child draws a numeral card for a product number (24). He gives all possible multiplication combinations for the number.
39. Matching Game
Expose a number of combinations in card holder. Be sure to have more than those actually needed for the drill. Give each child an answer card for one of the combinations. The child inserts his answer under the correct combination.
40. Seat of Honor
Choose a front seat and call it the Seat of Honor. Dictate an example or a word problem. Individuals work silently. The child who finishes first rises. As soon as a majority of the class have finished, call upon the first child to give the answer. If his response is correct, he takes the Seat of Honor. If, however, he should have the answer incorrect, the next child is called upon, and so on, until the child with the correct answer is reached.

41. Climbing the Stairs

Draw a set of "stairs" on the chalkboard and write an open sentence (equation with a placeholder) on each step. Have the children, in turn, solve each equation, beginning at the bottom step. If a child makes a mistake at any given step, he "falls down the stairs" and must start over.

42. I Am Thinking

Make statements such as the following: "I am thinking of 2 numbers whose product is 42." "I am thinking of a number which, divided by 9, gives a quotient of 8." The children identify the numbers.

43. Riddles

Make up a riddle involving multiplication or division. For example, "I am 6 times as much as 4. What am I?" Call on a child to solve the riddle; then let the child make up a riddle of his own and call on another child to solve it.

44. Baseball

The "batter" must answer all the related combinations of a given combination before he is allowed to claim a run. Scores for Boys and Girls may be recorded on the board.

45. Telephone

The one calling may say, "I am calling Main 56." The child designated to "answer the telephone" responds by saying something similar to "Mr. 56's residence. 7 times 8 speaking."

46. Mailman

Each child is given a house number. The mailman has 2 letters for each one. He says, for example, "I have mail for 8 times 4." The child whose house number is 32 claims the mail.

47. Mental Race

Dictate: " $(5 - 4) \times (2 + 6) = 2$ times what number?" 2 children compete to mentally find the answer; the winner races another child to find another answer.

48. Group Race

Groups are given slips of paper on which are written examples similar to the one above. There is one exercise for each member of the group. A child finishes his, passes the paper to the next member of the group to solve the second example, and so on. The group which is finished first with the greatest number of correct answers wins.

49.

Double Operation

Place the column of numerals 0 through 9 on the chalkboard several times in random order. Assign a child to each column. At a given signal direct the contestants to, for example, "Multiply each number by 0 and then subtract 2." The first child to complete his column correctly is the winner.

50.

Race Into Space

Draw pictures of 2 large rockets on the chalkboard and a picture of the moon above them. Write several statements of relation on each rocket; each statement should contain a numeral, a circular placeholder, and another numeral. Choose 2 teams; there should be one relation for each member of each team. At a signal, the first child on each team runs up to the board and writes the correct symbol of relation in the bottom statement on his rocket. He then returns and hands the chalk to the next child on his team, who runs up and fills in the placeholder in the second expression from the bottom; they relay continues until one team reaches the top of its rocket. The team that first reaches the top launches its rocket and lands on the moon. Variation: Use basic multiplication and division combinations or number sequence.

51.

Name the Operation

Place several "numeral cards" in a box. Have each of the more able children select a card at random. If a child selects the card with the numeral 45, he might say, for example, "I am thinking of the number 9 and 5. What operation should I use to get 45?" or "I am thinking of the numbers 50 and 5. What operation should I use to get 45?" The child who answers should verbalize the operation as follows: "Use the operation of multiplication. 9 times 5 equals 45." Or he may say, "Use the operation of subtraction 50 minus 5 equals 45."

52.

Oral Chain

Dictate numbers and indicate whether they should be added, subtracted, multiplied, or divided. The pupils solve each step as it is given. Keep a written record of the numbers dictated. Check back for errors immediately. For example, say, "3 times 2; minus 4; plus 8; divided by 2; times 5." The children should reply, "6; 2; 10; 5; 25." Other sequences may be:

3 + 60; - 13; X 5 (answer 250)

4 + 4; X 5; - 12; - 8; X 5; + 200 (answer 300)

53. Person with Best Eye

Place different objects around room. Have students estimate distance between objects, size, and weight of objects. Person getting the greatest number of answers right or nearly right wins.

54. Softball Game

Make a home run by correctly multiplying 7 on the home plate by each number on the diamond. Think 5 sevens, 3 sevens, 2 sevens, etc. Change the number on the home plate for needed practice.

Students should be able to:

*1. Identify $\frac{1}{2}$ of an object or set of objects.

a. Cut the following objects in half.

b. Cut the following objects in half.

*2. Use correctly and respond to use of the terms "whole" and "one-half" in reference to objects or sets of objects.

*3. Divide objects or sets of objects into halves, fourths.

a. 0, 0, 0, 0

Find $\frac{1}{2}$ of the set. (Divide objects for 2 people.)

Find $\frac{1}{4}$ of the set. (Divide objects for 4 people.)

b. Find $\frac{1}{2}$ of the points. Find $\frac{1}{4}$ of the points.

BEHAVIORAL OBJECTIVES

Students should be able to:

(Review and maintain previous concepts and skills)

- *1. Identify $\frac{1}{2}$, $\frac{1}{3}$, of an object or set of objects.
Limit of 12 objects.

Circle those which are only $\frac{1}{2}$ of an object.

How many $\frac{1}{2}$'s are there in each picture?

$$= 8 \frac{1}{2}'s$$

$$= 8 \frac{1}{2}'s$$

- *2. Divide an object or set of objects in $\frac{1}{2}$'s, $\frac{1}{3}$'s, $\frac{1}{4}$'s, $\frac{1}{5}$'s.

- a. Put a line through each object to divide it in $\frac{1}{2}$'s.
- b. Divide each set of objects in $\frac{1}{2}$ (so that there are the same number of objects in each of your new sets).

AV

PREPARED
MATERIALS

Students should be able to:

(Review and maintain previous concepts and skills)

- *1. Divide a whole object into halves, thirds, or fourths and identify an object divided in halves, thirds or fourths.

a. Divide into halves

b. Divide into thirds

Circle the correct word:

a.

halves, thirds, fourths

b.

halves, thirds, fourths

- *2. Identify $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$ of a whole object. Circle fractions which show what part of an object is shaded. State that the terms one-half, one-third, one-fourth mean "one of _____ equal parts".

a. Circle correct fraction

$\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{4}$
 $\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{4}$

- b. One half means one of (2) equal parts.
 $\frac{1}{3}$ means one of (3) equal parts.

SUGGESTED ACTIVITIES

- A. Fold and cut the last sheet of paper into halves. Now fold and cut the halves into halves again. Fold and cut the fourths into halves again. By manipulating the paper, lead the children to making the generalization that as we divide something into a greater number of equal pieces, the pieces become smaller.

LEVEL E

FRACTIONS

BEHAVIORAL OBJECTIVES

Students should be able to:
(Review and maintain previous concepts and skills)

- *1. Use all common fractions in dividing an object and a group.

$$= \frac{1}{2}$$

$$= \frac{3}{6}$$

$\frac{1}{2}$ of 1

$\frac{1}{2}$ of doz.

What part of the whole set are the squares?

$$\{ \square \square \square \square \} = \frac{3}{4} \text{ or } \frac{1}{2}$$

$$\{ \square \square \square \square \square \} = \frac{3}{5}$$

- *2. Find fractional parts of whole numbers giving a whole number answer.

What is $\frac{1}{3}$ of 36?

$$\frac{1}{2} \text{ of } 6 = 3$$

- *3. Change fraction to an equivalent fraction, with a different denominator. Reduce fraction to lowest terms.

Reduce the following fractions:

$$\frac{9}{81}$$

$$\frac{25}{75}$$

$$\frac{11}{55}$$

- *4. Place $<$, $>$, or $=$ between 2 simple fractions to show relationship. Reduce fractions to lowest terms.

Circle the correct sign: $\frac{1}{11} <$ or $> \frac{4}{27}$

*8. (Continued)

What is the LCM for: LCM
7, 2, 4 28

2/4, 2/8, 5/20, 1/2 LCM
16

Hints: Look at largest number and see if other no.'s
in the problem are multiples of it.

*9. Use the algorithm for addition and subtraction of
fractions, find LCD.

$$1/2 = 10/20$$

$$3/5 = 12/20$$

$$4/20 = 4/20$$

$$26/20 = 1 \frac{3}{10}$$

$$7/5 = 49/35$$

$$6/35 = 6/35$$

$$43/35 = 1 \frac{8}{35}$$

Steps: 1. Find LCD

2. Take denominators into LCD

3. Multiply factor by numerator

i.e. $\frac{10}{20} \times 1 = 10$
 $1/2 = 10/20$ ←

Students should be able to:
(Review and maintain previous concepts and skills)

*4. (Continued)

a. Put an X on the coins needed to buy each object.

9 --10¢ (N) (N) (N) (N)

(H) --98¢ (P) (P) (P) (P) (N) (N) (N) (N) (Q) (Q)

(nick
coin)

*5. Use the decimal point and dollar sign in writing money values for \$10.00, \$25.00, \$1.00, and \$1.50.

a. Write these amounts using the \$

dime _____

LEVEL C

MONEY

SUGGESTED ACTIVITIES

- A. Becoming familiar with the value of coins.
- B. Manipulative illustrations by individual children help them to understand the relative value of coins.
- C. Write money numbers.
- D. Write figures corresponding to spoken or written sounds.
- E. Make change.
- F. Use the four processes and fractions with money numbers.

LEVEL D

MONEY

PREPARED

PREPARED
MATERIALS

Students should be able to:
(Review and maintain previous concepts and skills)

- *1. Measure objects to nearest inch.

Measure these: _____ (1 inch)

1. 69-76,
82-84
1. HBW BK II
54
HRW BK II
73, 80, 175

- *2. Solve measurement problems involving 12 inches in a foot, three feet in a yard. Differentiate measurements stated in inches, feet, and yards. Limit one yard.

2. 71-72, 75-
76

Use , or = in the
12 inches 1 foot
2 feet 34 inches

- *3. Use standard units of measure such as: cups, pints, quarts, gallons in determining capacity to nearest ounce.

3. 87-88, 241
BK III
214-215

3. HBW BK II
61
HRW BK II
51, 72-73, 88,
131, 176

Make each true by putting in the missing number.

1 pint = (2) cups

1 gallon = (4) quarts

- *4. Determine weight of single object to nearest pound.

4. 275

4. Harcourt BK III
43
HBW BK II
60-61

Oral: Select seven objects to be weighed near these amounts:

1 pound 5 pounds

(Have students weigh to nearest pound)

198.

143, 269

- *8. Demonstrate the ability to find area of a square, rectangle, circle, parallelogram, and triangle by using formulas.

 $A = L \times W$

$A = S^2$

 $A = B \times H$

 $A = \frac{1}{2} B \times H$

 $A = \pi \times r^2$

LEVEL G

GEOMETRY

SUGGESTED ACTIVITIES

- A. Interpret the meaning of cubic foot capacity of a refrigerator or home freezer.
- B. Determine the square feet of wall to be painted in the classroom.
- C. Give students an opportunity to use a compass for creative design.
- D. Have several tin cans with wrappers which can be removed. Cut the wrappers from the top edge to the bottom edge. Measure the areas of the wrappers.
- E. Measure area of classroom floor and compute how much paper will be needed to cover the floor.

LEVEL C

SPECIAL TOPICS

BEHAVIORAL OBJECTIVES

Students should be able to:
(Review and maintain previous concepts and skills)

1. Identify Roman numerals 1-50.

a. Complete this with Roman Numerals.

I II III IV V _____ VIII IX X XI XII XIII XIV

b. Convert the following Roman Numerals to regular numbers. The first one is done for you.

VIII = 8
IX = _____
III = _____
XIV = _____

I = _____
VI = _____
XI = _____
IV = _____

1. BK III, 251

LEVEL C

SPECIAL TOPICS

SUGGESTED ACTIVITIES

- A. Point out local buildings and monuments where Roman Numerals have been used.
- B. Construct a clock face with Roman Numerals.
- C. Discover that when I comes after a letter of greater value it is to be added.
- D. Help children discover that there are different kinds of symbols or numbers which have been used in other times and by other people.

LEVEL D

SPECIAL TOPICS

BEHAVIORAL OBJECTIVES

HM BK 3 OTHER AV PREPARED MATERIALS

- Students should be able to:
(Review and maintain previous concepts and skills)
- Write Roman numerals 1 to 100
Count to 100 by 10's using Roman numerals. (oral)
Write the equivalent: $13 = (XIII)$ $79 = (LXXIX)$
 $XXX = (30)$ $C = (100)$
 - Read thermometer--record temperature using degree symbol.
Covered under measurement
 - Observe and discuss "chart form" of addition and multiplication matrix tables.

		factor					
addend		X	0	1	2	3	4
+	0	0	1	2	3	4	5
0	0	1	2	3	4	5	
1	1	2	3	4	5	0	0
2	2	3	4	5	6	7	8

LEVEL D

SPECIAL TOPICS (Cont.)

BEHAVIORAL OBJECTIVES

BK 3

OTHER

AV

PREPARED
MATERIALS

Students should be able to:
(Review and maintain previous concepts and skills)

- *4. Read to secure information from simple well-marked

Using the following bar graph, answer the following questions: How many boys were in the library? (20)
How many girls? (25)

Children in the library

Similar to above but with percents, fractions, or totaling groups.

5. Draw their own circle or bar graphs to display simple data such as spending a quarter and a nickel out of a half dollar.

Draw your own circle or bar graph to display the following items out on a total:

25¢ out of 50¢

One foot out of four feet
3 1/2 out of 8°

236.

1. 295, 302-304
311

LEVEL E

PREPARED
MATERIALS

BEHAVIORAL OBJECTIVES

HM
BK 4

OTHER

AV

- Students should be able to:
(Review and maintain previous concepts and skills)
1. Write Roman numerals for numbers to 500.
 2. Read distances from simple maps.
 3. Read and make graphs--charts.
 - a. Make a bar graph to show the averages of boys vs. girls.
 - b. Make a circle graph to show how the dollar is used by the government (defense, education, etc.)

1. 22-23, 27
1. HRW BK IV
222-223
HBW BK IV
2
2. HBW BK IV
125
3. 84-87, 272-279
3. HRW BK IV
239, 286-287,
323
HBW BK IV
267-268, 272

LEVEL E

SPECIAL TOPICS

SUGGESTED ACTIVITIES

- A. Collecting and being able to read copyright dates on books indicated in Roman numerals.
- B. Collecting and being able to read dates on buildings indicated in Roman numerals.
- C. Looking up the history of numbers.
- D. Changing Roman numerals to Arabic and vice versa.
- E. Ask children to number their papers for arithmetic or spelling by using Roman numerals.

LEVEL F

SPECIAL TOPICS

PREPARED
MATERIALS

BEHAVIORAL OBJECTIVES

HM

BK 5

OTHER

AV

Students should be able to:
(Review and maintain previous concepts and skills)

- *1. Convert fractions and decimals to percents and percents to decimals.

$$1/2 = \frac{.50}{2 \overline{) 1.00}} = 50\%$$

% always moves decimal two places to the right

$$7/8 = \frac{.875}{8 \overline{) 7.000}} = 87.5\%$$

2. Solve conversion problem using acre, square yard, rod, square mile.

$$144 \text{ sq. in.} = 1 \text{ sq. ft.}$$

$$9 \text{ sq. ft.} = 1 \text{ sq. yd.}$$

$$30 \text{ } 1/4 \text{ sq. yd.} = 1 \text{ sq. rod}$$

$$160 \text{ sq. rd.} = 1 \text{ acre}$$

$$640 \text{ acres} = 1 \text{ sq. mile}$$

A farmer owns 320 sq. rods of land, how many acres does he own?

3. Read, make graphs and charts, including bar line graphs. Include graphs with fractions and decimals when possible.

Give examples from math workbook to explain graphs, and charts.

239.

318, 320,
321, 328

2. HRW BK V
250-256
HBW BK V
167-169

3. 88-93, 280-
283

LEVEL F

SPECIAL TOPICS

SUGGESTED ACTIVITIES

- A. Estimating distances of school from home in blocks, half mile, and one mile.
- B. Discovering the relationship of rate of travel, time traveled, and distance traveled.
- C. Constructing and keeping progress charts and graphs for spelling and arithmetic grades.
- D. Making charts showing school attendance.
- E. Complete pattern for "What's my rule?" games. Solve problems by finding the rule.

LEVEL G

SPECIAL TOPICS

HM BK 6 OTHER AV PREPARED MATERIALS

BEHAVIORAL OBJECTIVES

Students should be able to:
(Review and maintain previous concepts and skills)

1. Locate points on a coordinate plane and graph ordered pairs.

- a. Find the point (1,4). Which letter is there? (A)
- b. Find the point (-1.5, -2.3). Which letter is there? (B)

Graph the following ordered pairs:

- a. (1,3)
- b. (1,-4)
- c. (1.3,2)
- d. (-4.5,5)

2. Use Venn diagrams to picture union and intersection of sets.

- a. (1, 5, 7, 9) \cup (2, 5, 6, 7, 8, 10, 11) = (5, 7)
Show both union and intersection of these sets by use of Venn diagrams.

- b. (Rational numbers) \cup or \cap (Irrational numbers) =
Use Venn diagrams to solve both.

1. 94-95, 97, 144-145, 168
1. FS-251 Broken Line Graph

- 2.a. Union 5, 11, 30
- b. Intersection 4, 11, 30, 99, 139, 165, 167, 173-175
